That's amazingly gross!

Many creatures, including you, have the power to shoot some pretty gross stuff really far.

The icky mist of your sneeze can travel up to 10 feet! But that's nothing compared to the llama, which can spit up to 15 feet.

Digest these other disgusting distances!

bird barf

Baby fulmar birds protect themselves by shooting a stream of bright orange barf a whopping **10 feet**.

stinky skunk oil

A skunk can spray a stinky, oily mixture from its rear up to **12 feet** to ward off predators.

caterpillar poop

Silver-spotted skipper caterpillars shoot their poop up to **5 feet** away to keep hungry birds off their scent.

lizard tongue

The veiled chameleon can shoot out its tongue almost **2 feet**—longer than its own body!

lizard blood

Horned lizards can squirt blood out of their eyes **3 feet** to scare away predators.

kid spit

Cover that cough! Your spit and germs can travel up to **3 feet**.
